a throttle valve being fully closed, while during coasting, maintaining engagement of a high speed side frictional device until a low speed side frictional device obtains a predetermined torque capacity at a time of downshifting and stopping the maintaining engagement to reduce the torque at the high speed side frictional device when the fuel stopping is cancelled and supply is restarted when the downshifting is output while the fuel supply is stopped and the high speed side frictional device is maintained.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
